Texwin tex fashions is a group that aspires to be a top global entity by leveraging technology and knowledge to create value in the textile industry. Our main motivation is to satisfy our customers by providing them with better quality, cutting-edge technology, and ongoing innovations. In addition, we strive to bring a world-class system and the highest ethical and professional standards to our work.

Mission

A company's mission should be to provide high-quality products, build on the excellence of its employees, and add value to its services.

These are the three pillars of any business's success, and we strive to be the best in each category.

We believe a company's mission should be to provide high-quality products, capitalize on its employees' expertise, and add value to its services. These three pillars are essential to the success of any business, and we strive to be the best in each of them.

we produce a
high-quality range of
products

With two production units comprising

210
machineries

400+
skilled employees

We produce a high-quality range of fabric manufacturing natural fabrics such as cotton, polyester, viscose, Modal, and many types of fancy fabric in a short lead time using innovative technology.

The fabric is knitted in our fabric factories and woven according to current market trends and customer demands.

Our team of professionals who have rich experience in designing, manufacturing, selling & servicing of textile products. We have an excellent track record of delivering high-quality products at competitive prices with timely delivery by using high-quality threads and other materials that strictly adhere to international quality control standards, with all raw materials sourced ethically, ensuring long life for the garments. T-SHIRTS are our main product.

Process

We handle the entire production process in-house, from knitting to dispatch and delivery.

Our main goal quality

The best way to maintain a high level of quality is by constantly improving.

Therefore, we strive to improve our productivity, maintain quality throughout our operations and minimize material waste. Our quality analysts closely monitor the manufacturing procedures to ensure that our product line adheres to the standards. In all of our processes, we adhere to labor and production laws and quality control. Our proof of quality is evident in our diverse knitting fashion garments. We ensure that every part of each garment meets the standards set forth by our consumers.

- As we all know, Raw materials are the foundation of any product and are equally important to us. A dedicated team handles raw material selection.
- Knitting is the second most commonly used method of fabric construction, after weaving. Yarns are interlaced to create a thick, flexible, and elastic fabric.
- Textile wet processing is a collective term used for processes such as dyeing, printing, and finishing. This method necessitates using a large amount of water, dyes, chemicals, and other materials.
- Cutting is the process of cutting pattern pieces from specified fabric to make garments. Fabrics are cut to prepare garment assembly using graded pattern markers and in accordance with the issue plan.
- Sewing is the most important operation in manufacturing garments or other similar products. Sewing is joining different parts of a garment using a needle and thread. Sewing's primary function is to create seams.
- We strive to keep our products and services of the highest quality. In all of our processes, we adhere to labor and production laws and quality control.
- At every stage of our manufacturing process, we consider the environment and human safety. Safety is always our top priority.

Knitting

40+ circular knitting machines.

Qualities of single jersey,
Open width spandex Jersey,
Rib, Interlock and fleece.

Using fabric engineering techniques
to predict qualities at first time.

Fabric Processing

100

Ton of softflow dyeing and finishing per month

50

Ton of bleaching and washing

Fabric Finishing

Regular Clean Enzyme

Singed

Brushed

Pewach Finish

Rubber Belt Compact Finished Qualities

Garmenting

We handle the entire production process in-house, from knitting to dispatch and delivery.

Unit I

120

sewing machines
capacity per day

1 Lakh

pieces producing
every month

Unit II

90

sewing machines
capacity per day

1/2 lakh

pieces producing
per month of
kids wear, baby wear
